

Deliverables Reviews Guide (Technology Template)

The reviewing activity is a one that takes on many forms and is done across a project/program for most deliverables. The template outlines the details required for a reviewer to capture the commentary and feedback from reviews they conduct on behalf of a Project/Program. Welcome to the Technology Template Series and thank you for your purchase. We trust that you will gain benefit and insight from each of our templates. Our approach is to provide you with a standardised model and access to the knowledge gained over 30 years within the Information Technology industry and offers this in a modularised manner; thus allowing you to purchase only the pieces that you require, without purchasing an entire methodology or text book on the subjects covered. The structure is to provide you with the layout of each template, with details within each section that define what you are required to write to complete the document and in most cases examples of this.
