

Heat Source

Flora was hired to house-sit a sprawling mansion in the Colorado Rockies for the winter. With nothing to do, exploration of the house took up her spare time. In the basement, she discovered an old boiler that had feasible reason to exist, until she unlocked something from inside it. An elemental being, starved inside the ancient machine for over a hundred years, Nar confuses her for his old mistress and promptly bends her over the kitchen island to spank her bottom red. When he stops and realizes how long he had be trapped, he asks one thing of Flora: Find out what happened to his former mistress. Flora has a few questions of her own. How was she supposed to do her job with a flaming, naked man in the house? And just how many times was he going to be spanking her along the way?
